Software Architecture Document

1. Introduction

This document provides a comprehensive architectural overview of the system, using a number of different architectural views to depict different aspects of the system. It is intended to capture and convey the significant architectural decisions which have been made on the system.

This Software Architecture Document applies to the FitUS website which will be developed by the team.

2. Architectural Goals and Constraints

There are some requirements and constraints that significantly affect the architecture. The list of requirements and constraints is useful to completely review the architecture of this application. There are:

- Rapidly responding product to a customer who uses an application.
- There must be more options to sign in (sign in with Facebook, etc.).
- Databases must be normalized into BCNF to be conveniently handled.
- The backend structure must follow MVC structure.
- UX must be designed as part of the Website Layout structure.
- The application must work in a WiFi environment.
